

INGOT SOLUTIONS PRESENTS

Clarivise

Email Evaluator

AI-Powered Phishing & Spam Educator for Microsoft Outlook

Stop threats. Teach your team. In real time.

Confidential Sales Deck | April 2026

The Problem with Today's Email Security

Phishing and business email compromise are the #1 cause of data breaches worldwide. Yet most organizations still rely on tools that were designed decades ago — tools that block threats silently, punish employees after the fact, and teach nothing.

Traditional Approach	The Real-World Result
Monthly simulated phishing attacks	Employees dread IT, not threats
Silent spam filters blocking email	No visibility, no learning
'Shame and train' after a click	Anxiety, not awareness
One-size-fits-all security training	Forgotten within days
Minimum 25-seat requirements (KnowBe4)	SMBs left unprotected

KnowBe4 — the market leader — charges \$15–\$28 per user per year, requires a minimum of 25 seats, and delivers a once-a-month fake phishing email. If a user clicks it, they get punished with mandatory training. That's not security awareness. That's security theatre.

Introducing Clarivise — Email Evaluator

Clarivise is a Chrome extension that sits inside Outlook on the web and gives every user an AI-powered security advisor — right in their inbox, on every real email, in real time.

■ AI Analysis on Real Emails

Powered by Claude (Anthropic). Every email can be analyzed instantly — not once a month, on every suspicious message your team actually receives.

■ Phishing & Spam Scores

Returns a 0–100 phishing score, spam score, plain-English verdict (SAFE / SUSPICIOUS / SPAM / PHISHING), and a clear recommended action.

■ Link Decoder

Automatically decodes Trend Micro SafeLinks and Outlook URL-Defense wrappers to reveal the real destination domain. Flags domain mismatches instantly.

■ Teaches, Doesn't Punish

Each finding includes what the attacker is doing, why the technique fools people, and how to spot it next time. Users learn from real threats, not fake ones.

■ External Sender Detection

Reads Outlook's external-organization banner and factors it into the analysis automatically.

■ Gift Card Fraud Pre-Check

Fast local detection of common gift-card scam patterns before calling the AI — saves API cost and catches the most common CEO fraud in milliseconds.

■ Org-Specific Instructions

Admins can add custom instructions that are merged into every analysis — tailor the AI to your organization's context.

■ API Key Never Leaves the Server

The Anthropic API key lives in Supabase Edge Functions only. End users never see it, can't extract it, and can't abuse it.

How It Works

Step 1	User opens a suspicious email in Outlook on the web
Step 2	Clicks Analyze Email in the sidebar panel
Step 3	The extension extracts email metadata, body content, and links
Step 4	SafeLinks / URL-Defense wrappers are decoded locally to reveal real destinations
Step 5	Data is sent securely to your Supabase Edge Function
Step 6	Claude AI analyzes the email and returns a structured JSON verdict
Step 7	Results are displayed: verdict, phishing score, spam score, findings, and suggested action
Step 8	Each finding explains the threat technique and teaches the user how to spot it themselves

Sample Output — What Your Users See

Field	Example Output
Verdict	■■ PHISHING
Phishing Score	87 / 100
Spam Score	42 / 100
Summary	This email impersonates your IT department and attempts to harvest your Microsoft credentials via a spoofed email.
Finding 1	Display name 'IT Support' does not match sender domain 'mail-service-93.ru'
Finding 2	Link text shows 'microsoft.com' but real destination is 'login-verify-ms.xyz'
Lesson	Always check the actual sender domain, not just the display name — attackers can set any display name to make their email look legitimate.
Suggested Action	Do NOT click any links. Report this email to your IT security team immediately.

Why We're Different

Feature	Clarivise Email Evaluator	KnowBe4 Silver	Microsoft Defender
Works on real emails	■ Yes	■ Fake only	■ Yes
Explains WHY an email is a threat	■ Yes	■ No	■ No
Teaches users in context	■ Yes	■ After click	■ No
Decodes SafeLinks / URL Defense	■ Yes	■ No	■■ Partial
No minimum seat count	■ Yes	■ 25 min	■ Yes
Works without IT admin setup	■ Yes	■ No	■ No
Per-user AI analysis	■ Yes	■ No	■ No
Approx. price per user/month	From \$5	\$1.30–\$2.35	Included in M365 plans

KnowBe4's model is reactive and punitive — send a fake phishing email, wait for a click, shame the user with mandatory training. Clarivise is the opposite — proactive and educational. Every real suspicious email becomes a free teachable moment. Users get smarter every day, not once a month.

Security & Architecture

API Key Security

Your Anthropic API key is stored exclusively in Supabase Edge Functions as a server-side secret. It is never shipped to or accessible from end-user devices.

Per-Tenant License Keys

Each organization receives a unique extension token managed in Supabase. Tokens are stored hashed. Trial keys expire after 15 days. Annual keys after 365 days.

No Direct API Access

The extension never calls Anthropic directly. All requests flow through your Supabase proxy, which enforces rate limiting and token validation before forwarding.

Privacy by Design

Email content is transmitted only to your own Supabase project and then to Anthropic for inference. Feedback reports contain only metadata — no full email body is stored.

Supported Deployment

Compatible with Intune, Google Admin Console, GPO, and self-hosted Chrome packaging. See ENTERPRISE-DEPLOYMENT.md for full details.

Supported Outlook URLs

Works on outlook.office.com, outlook.office365.com, and outlook.cloud.microsoft.

Pricing & License Tiers

Tier	Price	Duration	Best For
Trial	Free	15 days	Evaluate the product with no commitment
Standard	From \$5/user/month or flat rate for small teams	Annual	SMBs and teams who want always-on email analysis
Pro	From \$12/user/month	Annual	Organizations needing advanced features, reporting, and

What's included in each tier:

Feature	Trial	Standard	Pro
AI phishing & spam analysis	■	■	■
Link decoder / SafeLink reveal	■	■	■
Phishing & spam scores	■	■	■
Educational findings	■	■	■
Gift-card fraud pre-check	■	■	■
Org domain configuration	■	■	■
Custom AI instructions	■	■	■
User feedback reporting	■	■	■
Admin console & key management	■	■	■
Priority support	■	■	■
Enterprise deployment support	■	■	■

Getting Started

1**Install in Chrome**

Load the extension from the Chrome Web Store (coming soon) or deploy unpacked via your organization's device management system.

2**Enter Your License Key**

Activate with your Trial, Standard, or Pro key. Connect the extension to your organization's Supabase proxy URL.

3**Open Outlook on the Web**

Navigate to outlook.office.com, outlook.office365.com, or outlook.cloud.microsoft.

4**Analyze Your First Email**

Open any email you're unsure about and click Analyze Email in the sidebar. Results appear in seconds.

5**Start Your 15-Day Trial**

No credit card required. No seat minimums. No commitment.
